AI for Office & Productivity

Google Gemini • ChatGPT • Copilot • DeepSeek • Grammarly

Training presentation: concepts, practical workflows, prompt structures, writing, research, email, Excel & data analysis

Learning Outcomes

What participants should be able to do after the module

Explain what generative AI is and where it fits into everyday office work.

Use AI to plan, draft, summarize, rewrite and organize information.

Create better prompts using a repeatable structure: Role + Task + Context + Constraints + Output.

Use AI for research and note-taking while checking facts and sources.

Write clearer emails and professional English with AI assistance.

Use AI to support Excel formulas, data cleaning, analysis and interpretation.

Apply privacy, accuracy, bias and human-review principles before using AI outputs.

1. Introduction to AI in Office & Productivity

AI is an assistant—not a replacement for judgment.

Artificial Intelligence

Systems that perform tasks associated with human intelligence: language, pattern recognition, prediction and decision support.

Generative AI

Models that generate text, summaries, ideas, tables, code, images and other content from instructions.

Productivity AI

AI embedded in office workflows to reduce repetitive work and improve speed, quality and consistency.

Key note: AI output can be useful and fluent while still being wrong. Always verify important facts, numbers and decisions.

2. AI Tools in the Module

Choose the tool based on the task, not the brand.

Google Gemini

Research, brainstorming, writing, multimodal tasks

ChatGPT

Writing, reasoning, summarization, analysis, structured outputs

Microsoft Copilot

Office-integrated assistance and workplace productivity

DeepSeek

Reasoning, coding and general-purpose AI assistance

Grammarly

Grammar, tone, clarity and communication refinement

3. AI-Powered Productivity Workflow

A simple structure for turning a task into a repeatable AI workflow.

01 Capture

Collect task, notes, data or requirements.

02 Plan

Ask AI for a checklist, outline or approach.

03 Create

Generate the first draft or analysis.

04 Review

Check facts, tone, calculations and completeness.

05 Refine

Improve with targeted follow-up prompts.

06 Deliver

Format for the final audience and channel.

4. Prompt Engineering: The Core Structure

Better instructions usually produce better, more controllable outputs.

ROLE

Who should the AI act as?
Example: HR manager

TASK

What must it do?
Example: Draft an email

CONTEXT

What does it need to know?
Audience, background, data

CONSTRAINTS

Length, tone, language, limits

OUTPUT

Format: bullets, table, email, etc.

Prompt formula: “Act as [ROLE]. Do [TASK]. Use [CONTEXT]. Follow [CONSTRAINTS]. Return [OUTPUT FORMAT].”

Key note: Add examples when the desired style or structure is difficult to describe.

5. AI for Note-Taking & Research

Use AI to organize information faster—but preserve source traceability.

Before research: define the question, audience, scope and required evidence.

During research: summarize long material, extract key points, compare viewpoints and build a question list.

Note-taking structure: Topic → Key idea → Evidence/example → Action/Question.

Ask AI to convert raw notes into headings, bullet points, meeting minutes or study notes.

Verification: check primary sources, dates, names, numbers and quotations.

Avoid entering confidential, personal or sensitive information into tools unless your organization explicitly permits it.

6. AI in Email & Communication

Professional communication can be faster without becoming impersonal.

Email Structure

Subject
Greeting
Purpose / context
Main request or information
Next step / deadline
Professional closing

Useful AI Tasks

Draft from bullet points
Shorten a long email
Adjust tone
Translate or simplify
Create subject lines
Suggest a polite response

Quality Checklist

Clear purpose
Specific action
Correct names/dates
Appropriate tone
No unsupported claims
Final human review

Example prompt: “Rewrite this email to be concise, polite and professional. Keep the original facts and make the requested action clear.”

7. Hands-On: AI for Writing & Summarization

Move from raw information to a clear, useful document.

Writing workflow: Brainstorm → Outline → Draft → Edit → Fact-check → Finalize.

Summarization levels: 1 sentence → 5 bullets → executive summary → detailed notes.

Specify the audience: student, manager, customer, technical team or general reader.

Specify tone: formal, friendly, persuasive, neutral, concise or instructional.

Ask for structure: headings, bullets, table, action items, FAQ or presentation outline.

Key note: Do not ask AI to “make it better” without defining what better means.

8. Basic English with AI

Use AI as a language coach, not simply as an automatic translator.

Grammar

Identify errors → explain why → show corrected sentence → give a similar practice sentence.

Vocabulary

Give simple meaning → synonyms → example sentence → common usage.

Communication

Rewrite for clarity → adjust tone → remove unnecessary words → preserve meaning.

Practice prompt: “Correct my paragraph. Highlight the mistakes, explain them in simple English, then provide a natural version.”

9. AI for Excel Formulas

Describe the spreadsheet goal, columns, conditions and desired output.

Formula Prompt Structure

“In Excel, column B contains sales and column C contains region. Write a formula to total sales for the North region. Explain each part and give an alternative using SUMIFS.”

Common Formula Areas

SUM / AVERAGE / COUNT
IF / IFS
SUMIF / SUMIFS
COUNTIF / COUNTIFS
XLOOKUP / INDEX-MATCH
TEXT, DATE and logical functions

Key note: Test formulas on known examples before using them across important workbooks.

AI can explain a formula, but it cannot guarantee that your workbook's column references and business rules are correct without enough context.

10. AI for Data Analysis

Turn a dataset into questions, findings, visualizations and decisions.

1. Prepare

Clean missing values
Check duplicates
Define variables
Confirm data types

2. Explore

Descriptive statistics
Trends
Outliers
Group comparisons

3. Explain

Key findings
Possible causes
Limitations
Business meaning

4. Present

Tables
Charts
Executive summary
Recommendations

Prompt structure: “Analyze this dataset. First describe its columns and quality. Then identify 3–5 meaningful patterns, support each with evidence, and state limitations.”

11. Responsible & Safe AI Use

Five checks before you trust or share an AI output.

Accuracy

Verify facts, calculations and important claims.

Privacy

Protect confidential and personal information.

Bias

Look for unfair assumptions or one-sided conclusions.

Copyright

Respect ownership, licenses and organizational policy.

Human Review

A person remains accountable for important decisions.

Rule of thumb: the higher the consequence of an error, the stronger the verification required.

12. Hands-On Practice: One Task, Five AI Skills

Use one realistic office scenario to connect the whole module.

Scenario: You receive a long project update with notes, deadlines, numbers and several email requests.

Task 1 — Summarize: create a 5-bullet executive summary.

Task 2 — Research: list questions that still need evidence or clarification.

Task 3 — Email: draft a concise professional response with clear next steps.

Task 4 — Excel: propose formulas for totals, status and deadline checks.

Task 5 — Presentation: turn the result into a 5-slide briefing.

Reflection: Which parts did AI accelerate? Which parts required human judgment?

AI Productivity Cheat Sheet

Prompt Template

ROLE: Who should you act as?
TASK: What should you do?
CONTEXT: What information matters?
CONSTRAINTS: Length, tone, limits
OUTPUT: What format should I receive?

Then: Review → Verify → Refine → Deliver

Key Takeaways

- AI saves time on repetitive knowledge work.
- Clear prompts improve output quality.
- AI is strong at drafting, organizing and transforming information.
- Human judgment is essential for accuracy and accountability.
- Protect confidential information.
- Always verify high-impact outputs.

Learn the workflow, practice the prompts, and build your own AI-assisted office routine.
