DAY 08 • TRAINING MODULE

AI for Office & Productivity

Google Gemini • ChatGPT • Microsoft Copilot • Docs & Sheets

Research smarter. Draft clearly. Automate routine work.
Verify results and collaborate responsibly.

CLASS SESSION • 9:00 AM–1:00 PM

What you will be able to do

By the end of the session, learners should be able to apply AI to common office tasks—not simply generate text.

Find & organize

Use AI-assisted search and summarization to turn information into clear notes.

Draft & improve

Create and revise emails, reports, meeting notes, and documents.

Plan & automate

Break repeatable work into steps, templates, checklists, and workflows.

Collaborate safely

Share useful outputs while checking accuracy, privacy, and permissions.

CORE PRINCIPLE

AI is an assistant, not an authority: the user remains responsible for the final work.

AI assistants: strengths and limits

Generative AI predicts and creates useful responses from patterns in data and the context you provide.

Good uses

- First drafts and rewrites
- Summaries and structured notes
- Brainstorming and explanations
- Turning instructions into tables, checklists, or plans
- Helping explore formulas or code

Needs human review

- Facts, citations, dates, and current policies
- Calculations and spreadsheet formulas
- Sensitive or high-impact decisions
- Legal, medical, financial, or HR conclusions
- Anything involving private or confidential data

REMEMBER

AI can sound confident while being wrong. Verify important claims with trustworthy sources and original records.

AI-powered search & knowledge management

Use AI to orient yourself quickly, then confirm key claims in reliable source material.

1. Ask a focused question

Name the topic, audience, time period, region, and what decision the research should support.

2. Request a structure

Ask for a summary, comparison table, glossary, key questions, or list of source types to check.

3. Verify the answer

Open original sources. Check publication date, author, evidence, context, and whether sources agree.

EXAMPLE PROMPT

“Explain the main differences between Google Docs and Microsoft Word for a small training team. Use a comparison table, identify features that may vary by plan, and list claims I should verify in official documentation.”

Knowledge management tip: save verified summaries with a title, date, owner, source links, and review date.

Write prompts that produce useful work

A strong prompt gives the assistant enough context to deliver a relevant first draft.

ROLE

What perspective should it use?

TASK

What exactly should it produce?

CONTEXT

Who is it for? What background matters?

FORMAT

Email, table, checklist, outline, or steps?

CONSTRAINTS

Length, tone, language, deadline, or exclusions?

CHECK

Ask it to flag assumptions and uncertain details.

WEAK → STRONGER

Weak: “Write an email.”
Stronger: “Draft a polite 120-word email to staff announcing Friday’s training at 10:00 AM. Include the purpose, what to bring, and a request to confirm attendance. Use a clear subject line and do not invent a venue.”

Drafting, editing & proofreading documents

AI can help improve clarity and structure while preserving the writer's intended meaning.

Draft

Create an outline, first draft, subject line, report section, or standard operating procedure from supplied facts.

Edit

Ask for clearer wording, a more professional tone, shorter sentences, consistent headings, or plain-English explanations.

Proofread

Check grammar, spelling, punctuation, formatting consistency, and ambiguity—then inspect every suggested change.

SAFE EDITING PROMPT

"Proofread the text below for grammar, spelling, and clarity. Keep the facts and meaning unchanged. List any uncertain wording separately; do not add new facts."

Practical output: a clean document, a list of edits, and a short note describing any facts that still need confirmation.

AI for workflow automation

Automation is most effective when the task is repetitive, rules are clear, and exceptions are understood.

MAP

Write each step in the current process.

STANDARDIZE

Agree on fields, naming rules, and decision criteria.

ASSIST

Use AI to draft templates, classify text, or suggest next steps.

CONNECT

Use approved automation tools or integrations where available.

TEST

Check normal cases, errors, edge cases, and permissions.

MONITOR

Track failures and keep a human approval step for important actions.

EXAMPLE

Turn incoming requests into a standard table: request date, requester, category, priority, owner, status, and next action. Review classifications before sending or updating records.

Chatbots & virtual assistants

Use an assistant as a conversational interface for drafting, explaining, planning, and transforming information.

Useful tasks

- Explain a concept at beginner level
- Turn notes into an agenda or minutes
- Generate FAQs from approved documents
- Create checklists and action plans

How to get better results

- Provide relevant context and examples
- State what a good answer looks like
- Ask follow-up questions
- Request assumptions and uncertainties
- Check output before using it

EXAMPLE

“Convert these meeting notes into a table with columns: Action, Owner, Due Date, Dependency, and Status. Use ‘Not specified’ when the notes do not provide a value.”

Do not paste passwords, personal records, confidential client details, or restricted business information into unapproved tools.

AI for team collaboration

AI can help teams prepare, document, and follow up on work; shared access and accountability still matter.

Before a meeting

Draft an agenda, identify decisions needed, summarize background reading, and prepare questions.

During / after

Where permitted, capture notes; separate decisions from discussion; create action items and owners.

Shared documents

Use comments, version history, naming conventions, access controls, and clear document ownership.

TEAM RULE

AI-generated meeting notes are drafts. Confirm names, decisions, deadlines, and action owners with participants before circulating.

Good collaboration means transparent AI use, clear responsibility, and appropriate permission to access shared files.

Choose the right tool for the task

Capabilities change over time and may depend on account, plan, region, language, and organization settings.

ChatGPT

Drafting, explanation, brainstorming, summarization, data or file analysis when supported.

Google Gemini

AI assistance across supported Google experiences; exact integrations depend on the account and plan.

Microsoft Copilot

AI assistance across supported Microsoft 365 apps and services; availability varies by license.

Google Docs

Collaborative writing, comments, suggestions, document organization, and sharing controls.

Google Sheets

Tables, formulas, sorting, filtering, charts, and collaborative data work.

Copilot in Excel / Sheets + AI

Use AI to help reason about data, but validate formulas, totals, and outputs in the actual spreadsheet.

SELECTION CHECKLIST

Fit to task • Approved by organization • Privacy settings • Source traceability • Cost and access • Human review

10 • HANDS-ON EXERCISE

Practice: Docs and Sheets

Complete these tasks using sample, non-sensitive information.

Google Docs / document task

1. Ask AI for a professional email announcing a training session.

2. Paste the draft into a document.

3. Improve the subject line and paragraph structure.

4. Proofread; check date, time, audience, and tone.

5. Save with a clear file name and share only with the right people.

Google Sheets / spreadsheet task

1. Create columns: Task ID, Task, Owner, Priority, Due Date, Status.

2. Add 10 fictional tasks.

3. Sort by due date and filter by status.

4. Ask AI to suggest a formula or summary, then test it.

5. Check blanks, duplicate IDs, and incorrect dates.

DELIVERABLE

One reviewed document + one clean spreadsheet + a short note listing what you verified manually.

Prompting lab: use a repeatable template

Work in pairs or individually. Replace bracketed items with your own scenario.

COPY, ADAPT, AND TEST

You are helping [audience/team].

- Task: [specific output needed].
  Context: [facts and background supplied by me].
  Format: [email / table / checklist / summary].
  Tone and length: [requirements].
  Rules: Do not invent missing facts. Mark assumptions clearly.
  Quality check: List what I should verify before using the result.

Challenge A

Make a 100-word staff announcement.

Challenge B

Summarize notes into 5 action items.

Challenge C

Create a spreadsheet quality checklist.

REFLECTION

Which instruction improved the output most? What was incorrect, vague, or missing?

Responsible AI: privacy, accuracy, fairness

Use organizational policies and tool settings as the source of truth for handling data.

PRIVACY

Do not enter sensitive or confidential information into tools unless your organization has approved that use. Minimize personal data.

ACCURACY

Verify facts, citations, calculations, names, dates, and policy statements. Check the original source when possible.

FAIRNESS & OWNERSHIP

Look for stereotypes, exclusion, and unsupported assumptions. Follow copyright, attribution, and workplace review rules.

BEFORE SHARING, ASK

Is it accurate? Is the data appropriate to share? Is the output fair? Do I have permission? Would I be comfortable explaining how it was produced?

For high-impact decisions, use qualified human judgment and established organizational procedures—not AI output alone.

Turn one-off AI work into reusable knowledge

A shared knowledge base helps teams reuse reviewed information instead of repeatedly starting from scratch.

Capture

Save useful prompts, templates, verified answers, and process notes in an approved shared location.

Label

Add title, owner, created date, source links, version, audience, and review date.

Maintain

Remove outdated copies, restrict access, review facts, and clearly mark drafts versus approved guidance.

EXAMPLE FOLDER STRUCTURE

01_Templates • 02_Approved_Guides • 03_Process_Checklists • 04_Training_Materials • 05_Archive

Never treat a saved AI answer as permanently correct; assign an owner and a review cycle for important guidance.

14 • WRAP-UP

Review, reflect, and apply

The goal is better work—not simply more AI-generated content.

- Can you write a prompt with task, context, format, and constraints?
- Can you check an AI answer against trustworthy sources?
- Can you improve a document without changing its facts?
- Can you use a spreadsheet safely and validate formulas?
- Can you identify data that should not be shared with an AI tool?
- Can you explain who reviews and approves the final output?

TAKEAWAY

ASK clearly
DRAFT quickly
VERIFY carefully
SHARE responsibly

Prayer & lunch break: 1:00–2:00 PM • Next session: apply these skills to real office scenarios.

Reference points & verification

Check current official help pages because product features, plan access, and availability change.

OpenAI Help Center

help.openai.com — ChatGPT features, data controls, files, and usage guidance.

Google Workspace Learning Center

support.google.com/a/users — Docs, Sheets, collaboration, and Gemini help.

Microsoft Support

support.microsoft.com — Copilot and Microsoft 365 app documentation.

Your organization’s policy

Use approved tools and follow internal rules for confidential data, retention, sharing, and review.

NOTE

This training deck explains general workflows; it does not promise that every feature is available on every account.
